

## Erratum

Craig JA, Barron A, Waish DM, Baxter GD. Lack of effect of combined low intensity laser therapy/phototherapy (CLILT) on delayed onset muscle soreness in humans. *Lasers Surg Med* 1999; 24:223–230.

In the legends for Figures 1 and 2 on page 227 of the article cited above, the symbols ■, ▲, and ● were displayed incorrectly as n, D, and l, respectively. The figures and their correct legends appear below.

The author regrets the error.

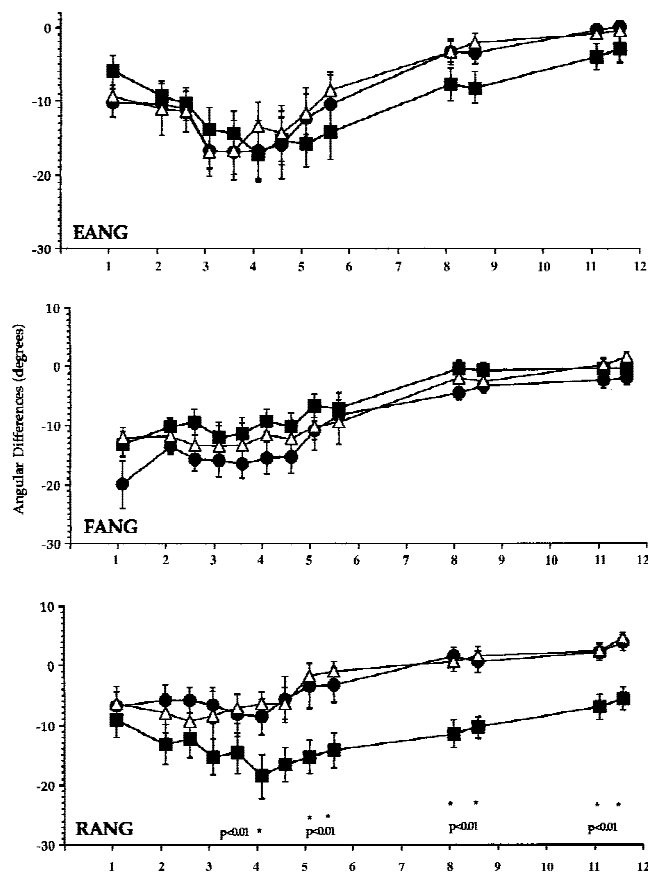

Fig. 1. Range of movement differences (means  $\pm$  SEM): EANG (upper); FANG (middle); RANG (lower). Control (■), Placebo (▲), 73Hz (●), Positive values represent an improvement and negative values represent a worsening in range of movement. Labels on the X-axis correspond to measurement days.

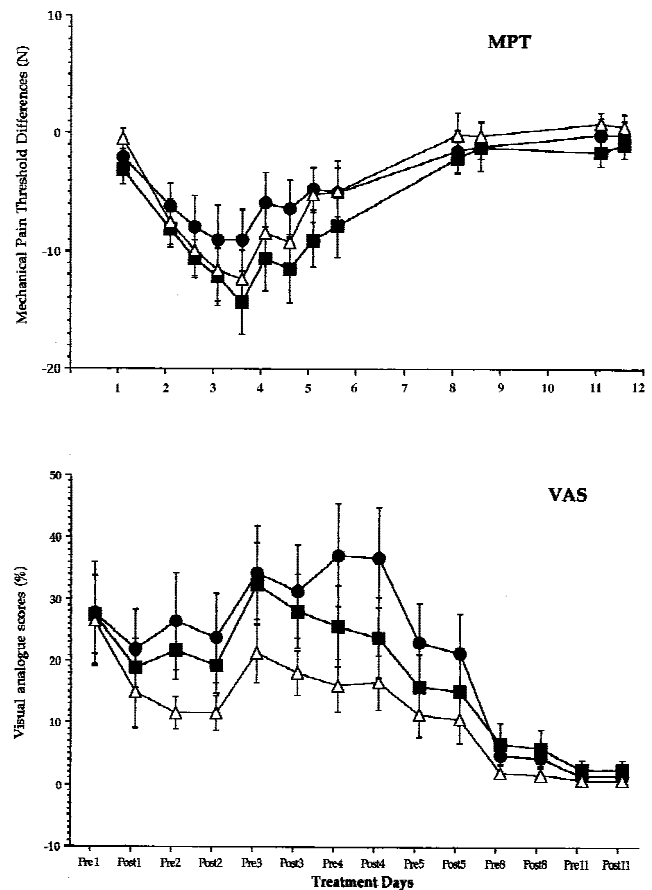

Fig. 2. Pain assessment (means  $\pm$  SEM): MPT (upper: difference scores); VAS (lower: raw scores). Control (■), Placebo (▲), 73Hz (●). Positive values in the upper graph reflect increases in pain while negative values in the lower graph reflect increases in tenderness. Labels on the X-axis correspond to measurement times.
